User Manual (with screenshots):

Please adhere to the following inorder to maximise the use and functionality of the app:

When you run / the program you will be greated with a page that displays the name and logo as well as the slogan of the app.

There is a menu dropdown on the top letf of the screen, it is a grey bar that says "Menu", when it is clicked the dropdown for further functionality of the app will be displayed as follows:

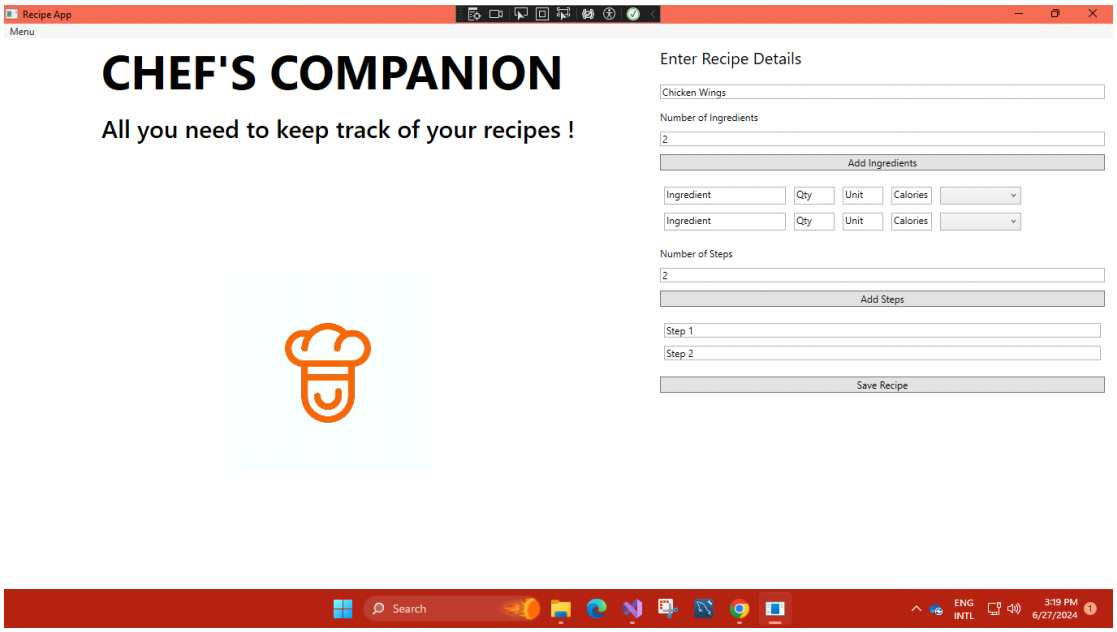

Each option provides different functionality. Here is a step by step manual on hot to use the app:

Steps:

1) Select the Enter Recipe Details option by double clicking on it.

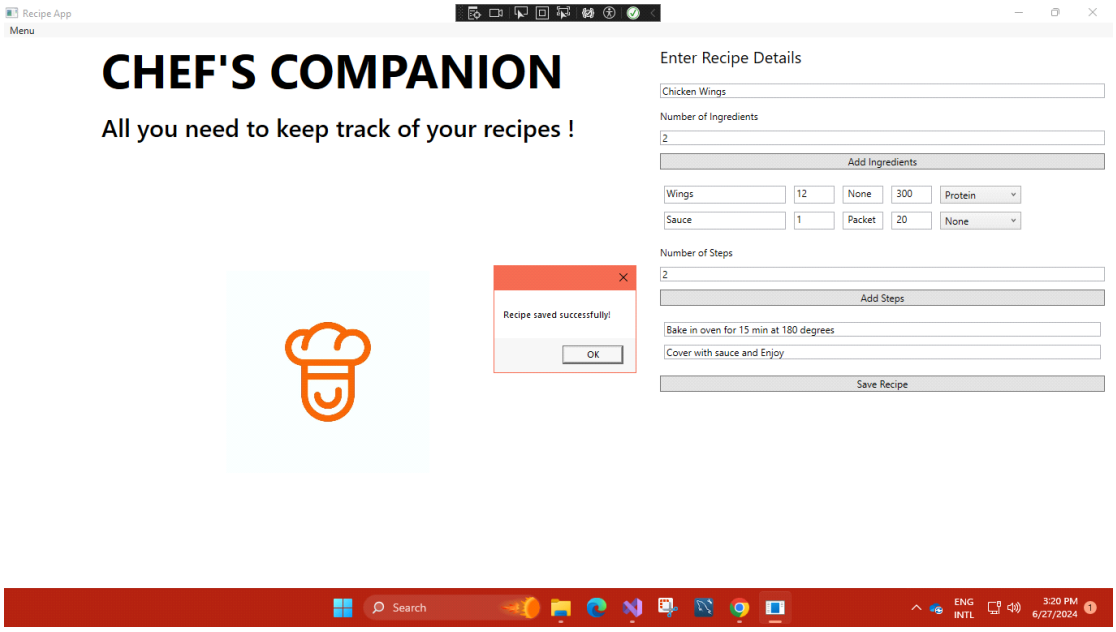

2) Enter the information requested as per the prompts.

3) Choose options of food categories from each ingredient from the drop down menu's.

4) Add each step description in accordingly.

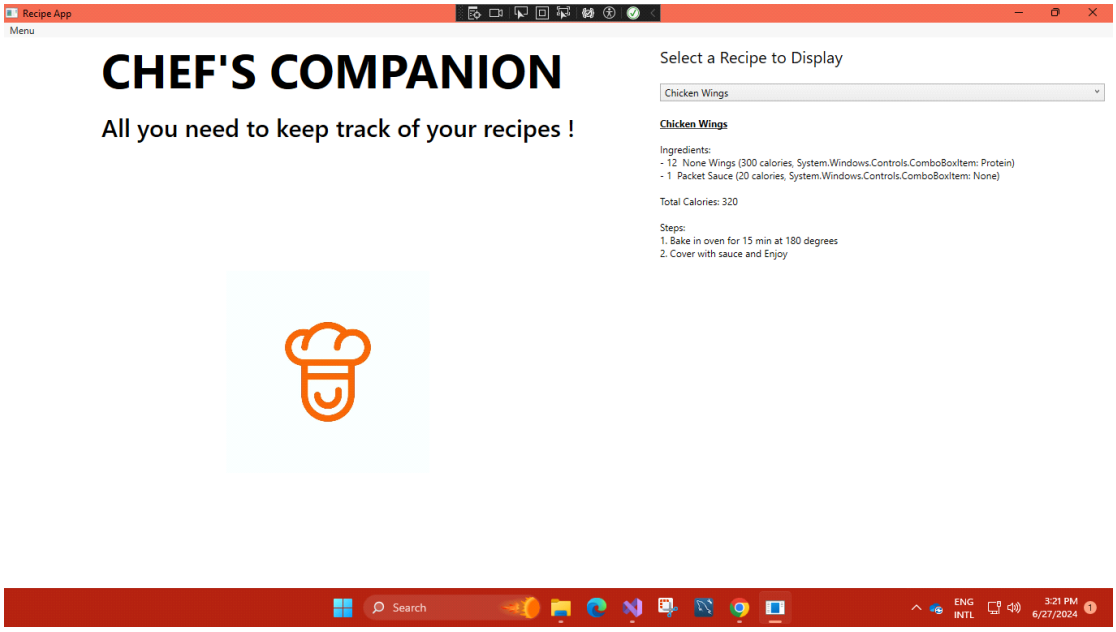

5) Click the save recipe button.

6) To view the recipe click on the menu drop down on the top left of the screen and then select Display Recipe.

7) Click the recipe drop down (grey bar) and select the recipe you would like to display.

8) Click on the display recipe button to view the selected recipe.

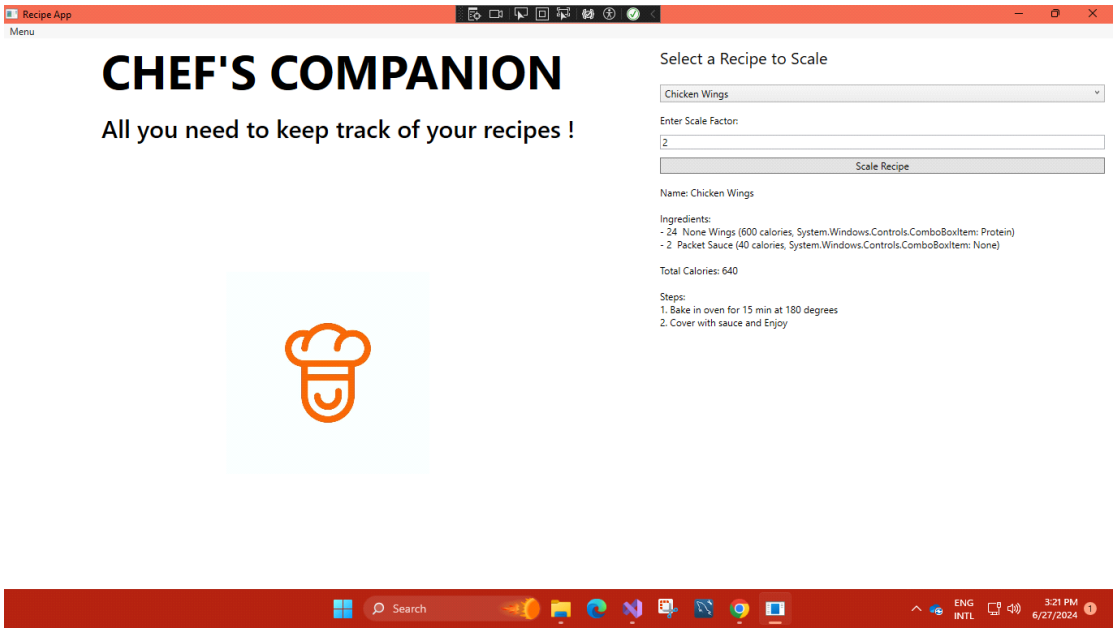

9) To scale the recipe click on the menu drop down then select scale recipe.

10) select the recipe you would like to scale.

11) Enter the factor by which you would like to scale it (1.5, 2 ect.).

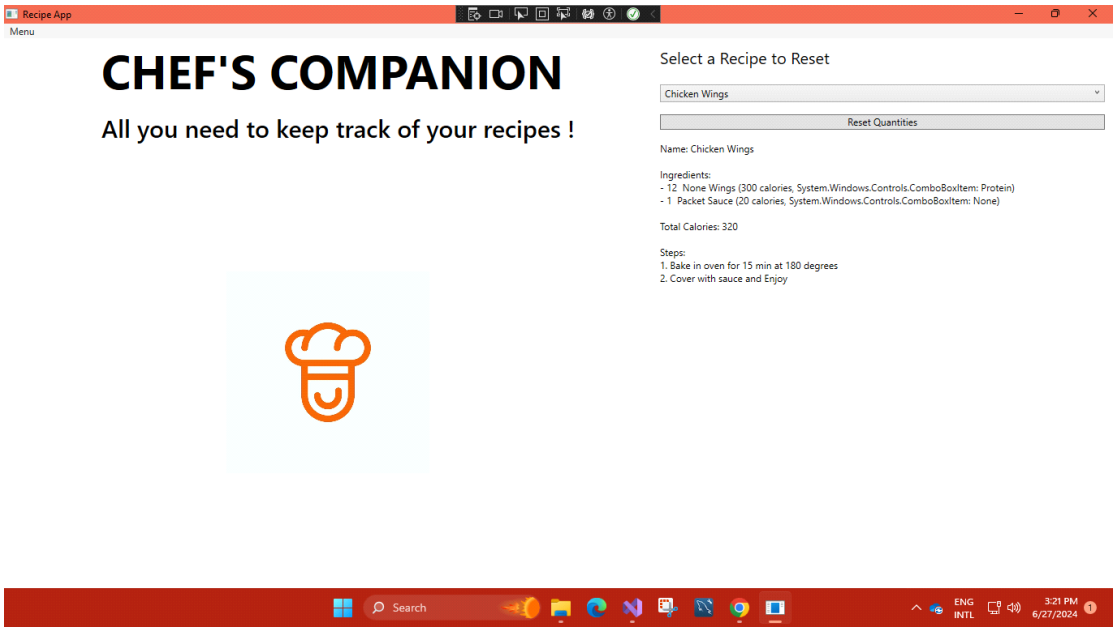

12) Click the Scale recipe button, the scaled recipe will be automatically displayed.

13) To reset the the values of a scaled recipe, click on the menu dropdown and select the reset quantities option.

14) select the recipe you would like to reset the quantities of and click the reset button.

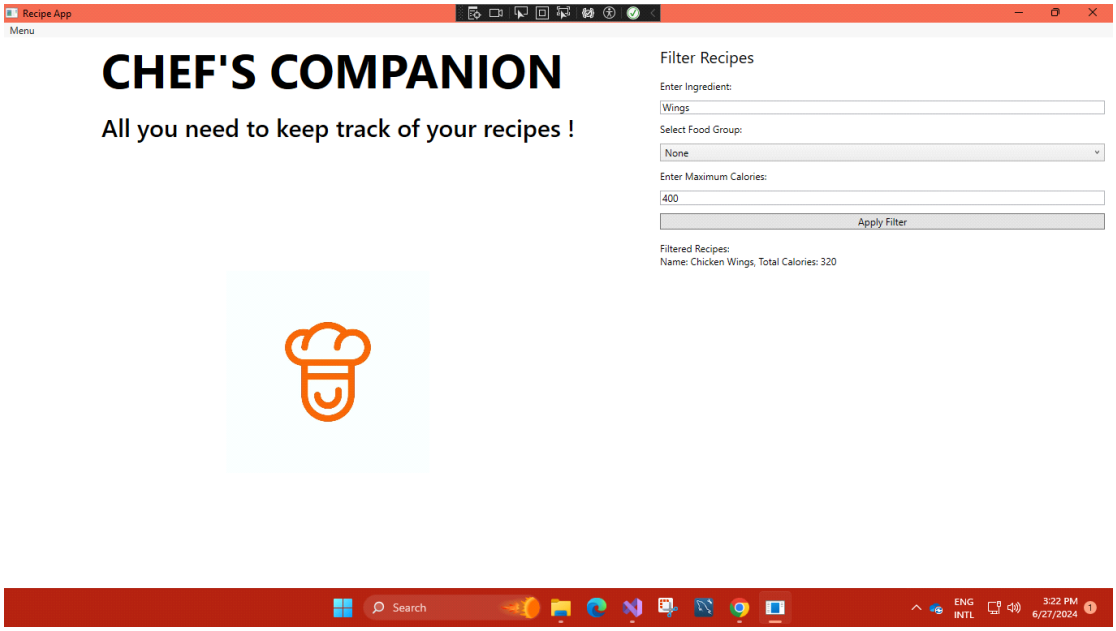

15) the reset recipe will automatically be dispalyed.

16) To filter search for a recipe , click on the menu drop down and select the Filter recipe option.

17) You may filter the search for recipes by ingredient, food group or max calories, individually. Or you may use two or all 3 to search for a recipe in the system.

18) Click the filter recipre button and the recipe name will be displayed.

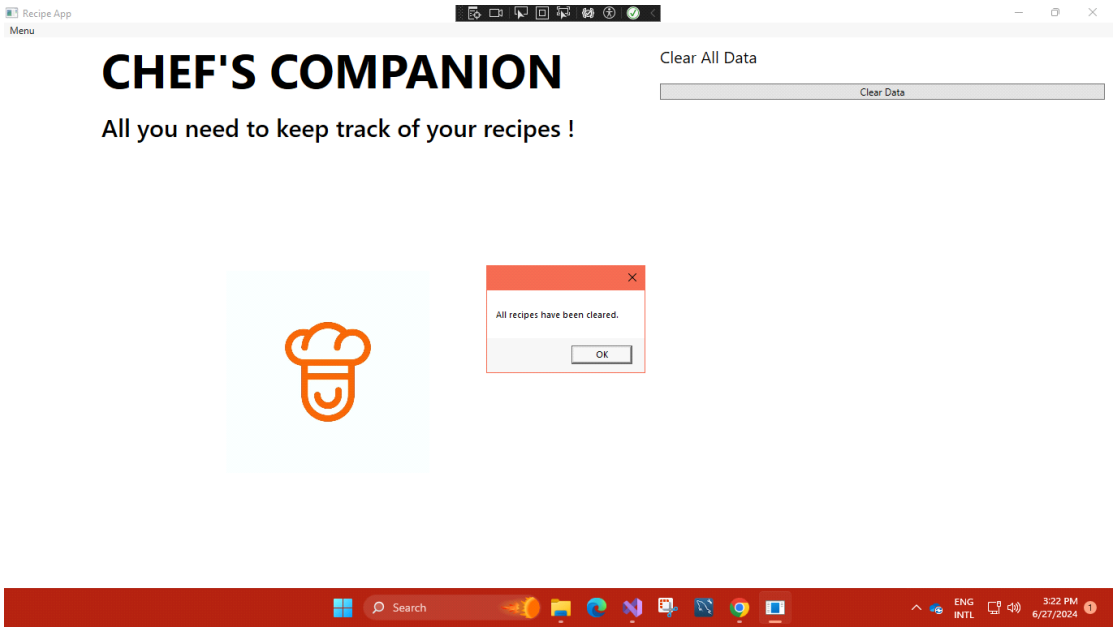

19) To clear all data / recipes from the system the user should click the menu dropdown and select the clear data option.

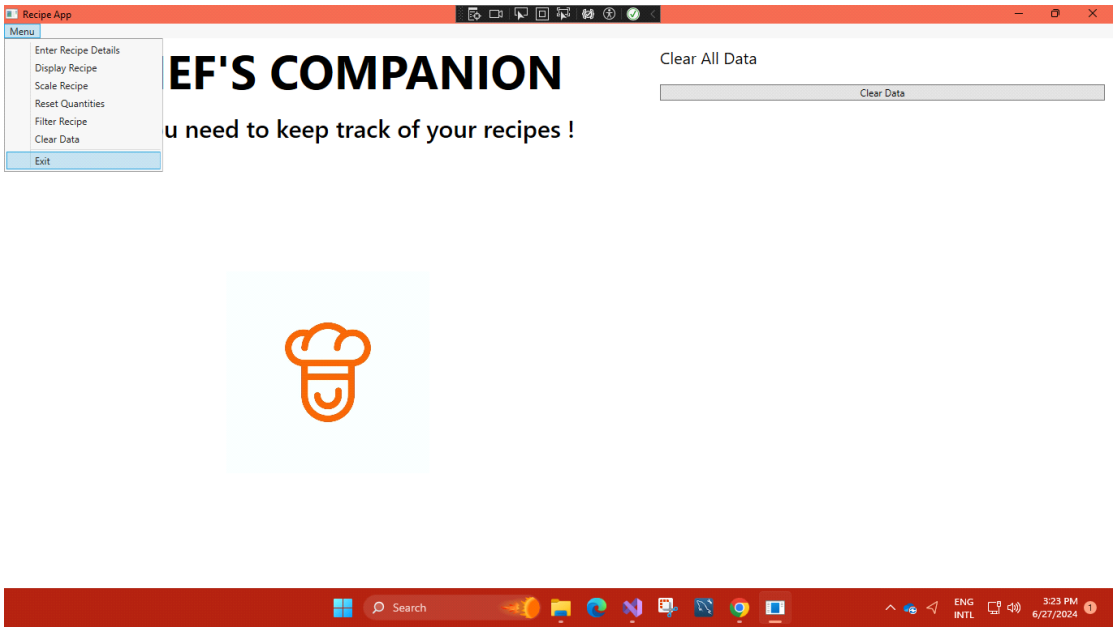

20) The user can then click on the clear data button and all recipes will be erased from the system.

21) to confirm if the data has been erased the user can select the menu dropdown and then procced to select the Display recipe option.

22) The recipe selector will be blank.

23) Finally, to clode the app or end the program the user may either A) select the Exit option which will terminate the program OR B) click the x button on the top right of the window which will also close the app / terminate the program.

END!

Sincerely Ibrahim Tagari (Developer).
